

Descrizione

Finestra in legno modello **LOGIKA** realizzata interamente legno lamellare, telaio sezione mm 80x70, anta sezione 80x75.

Tripla guarnizione in gomma applicata sul totale perimetro del telaio e montante centrale delle ante se a 2 o più battenti, completamente nascoste a finestra chiusa, nessun contatto con agenti esterni che ne garantisce durata prestazioni nel tempo.

Finestra con gocciolatoio inferiore in legno e portafinestra con soglia inferiore in alluminio a taglio termico e con apposite asole per espulsione eventuali infiltrazioni d'acqua.

La ferramenta di sospensione e di chiusura è interamente realizzata in acciaio zincato con nottolini a fungo antieffrazione classe 1 o 2 a richiesta, apertura anta a ribalta di serie e cerniere con regolazione tridimensionale complete di coperture aventi diverse colorazioni.

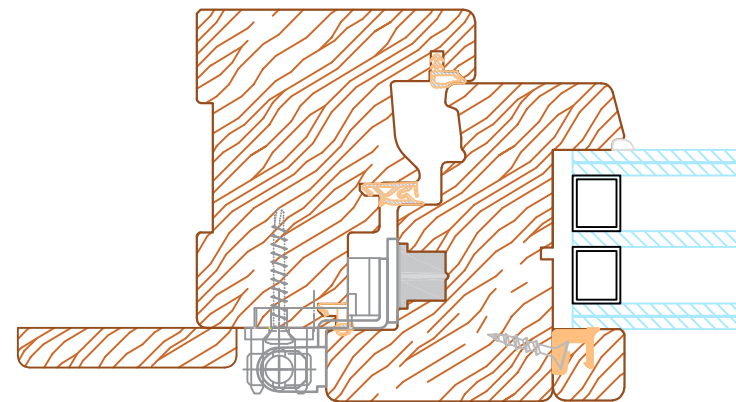

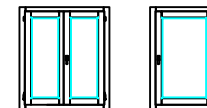

Vetrocamera fissato all'anta con sistema a clips avvitate nascoste sotto fermavetro asportabile, assoluta mancanza di chiodi a vista, massima sicurezza allo scasso (impossibile la spinta) e perfetta aderenza alla finestra.

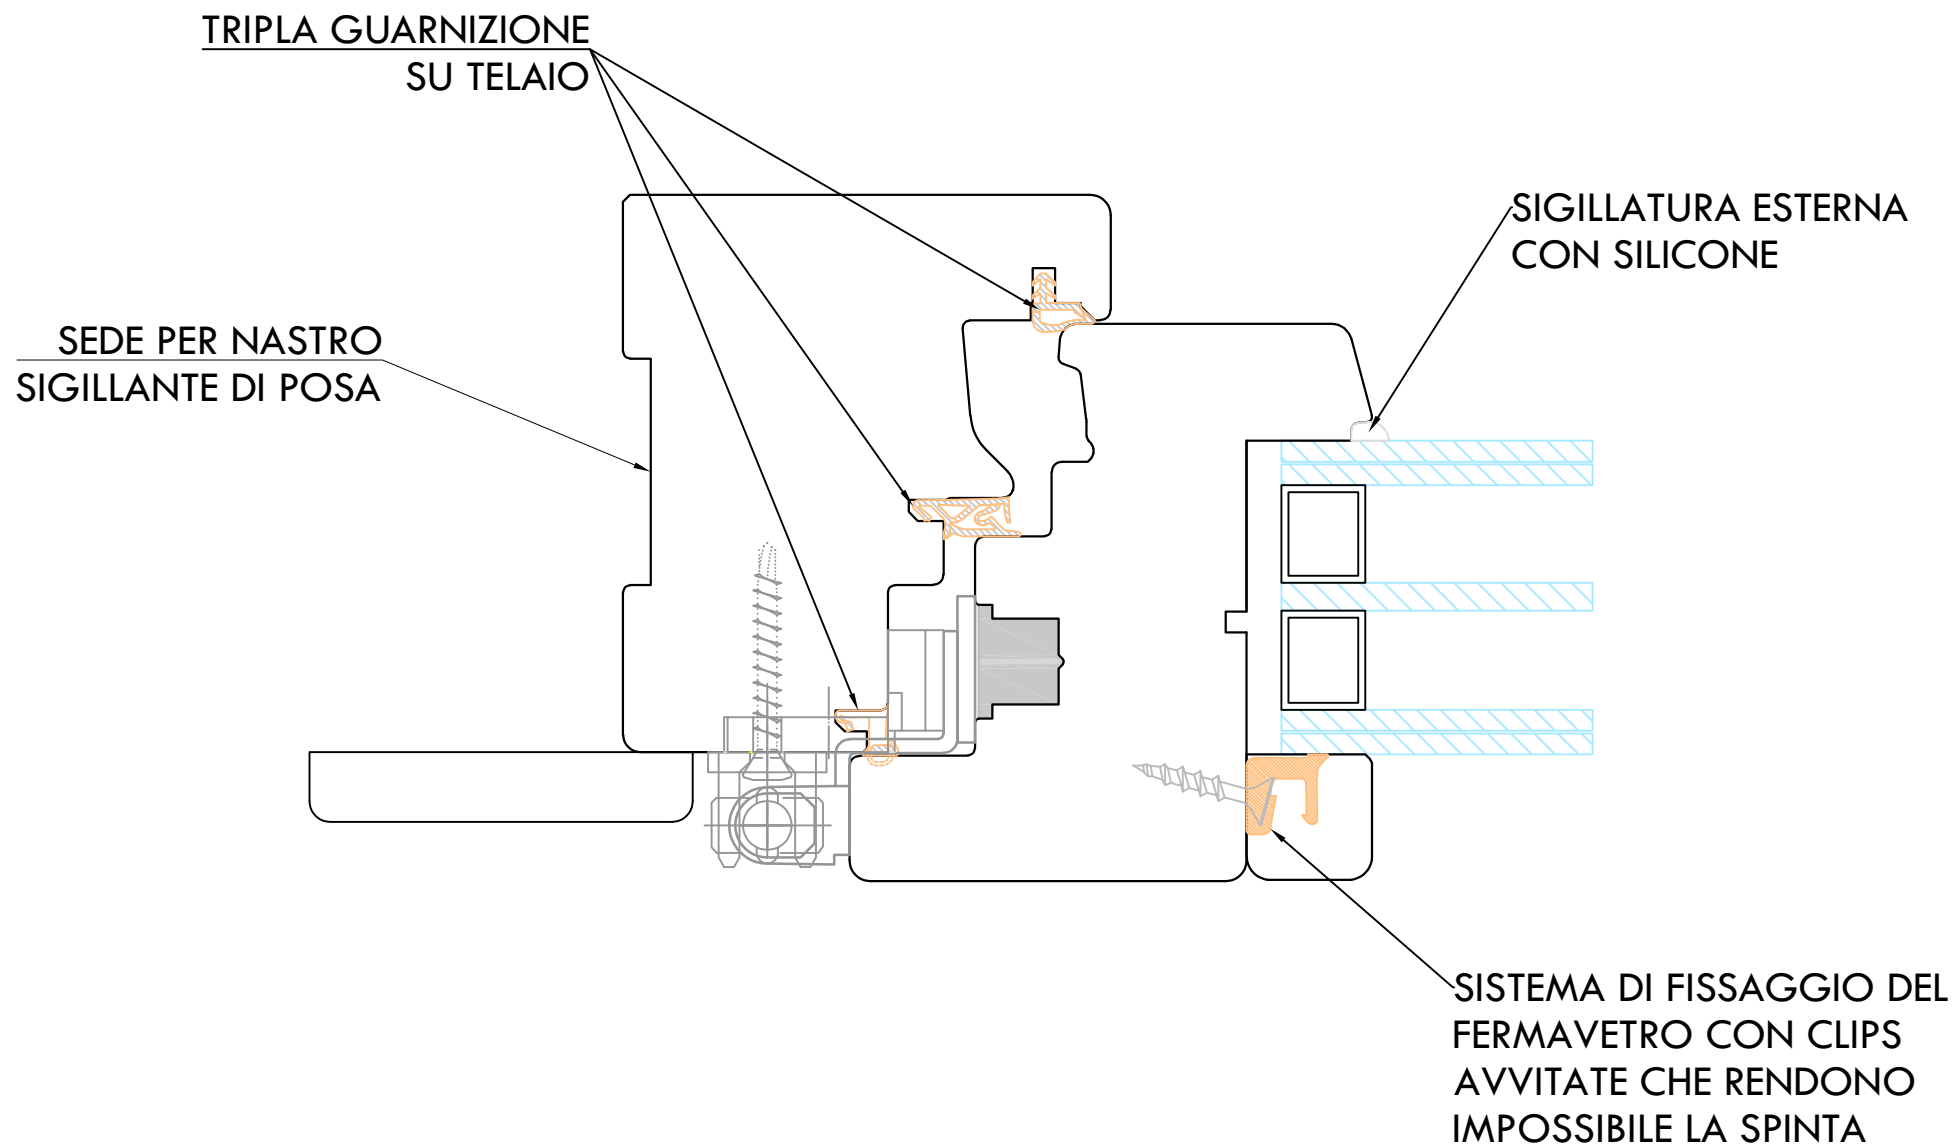

Può alloggiare vetrocamera sia doppio che triplo con spessore variabile da mm 30 a mm 44 in base a esigenze termico-acustiche e di sicurezza, sigillatura esterna con silicone; doppia lastra accoppiata distanziate da canalina bordo caldo e inserimento di gas argon per massima prestazione termica.

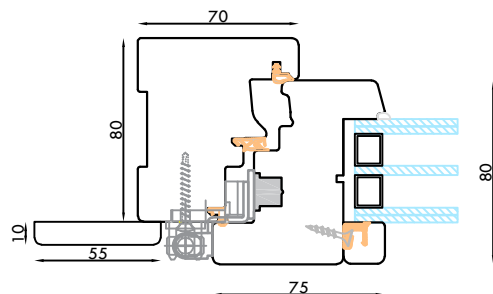

Verniciatura eseguita con vernici completamente a base d'acqua mediante trattamento a immersione, applicazione fondo e finitura a spruzzo; procedure intermedie di carteggiatura e finitura eseguite con sistemi automatici di ultima generazione.

Coprifili perimetrali interni sezione mm 55 x10

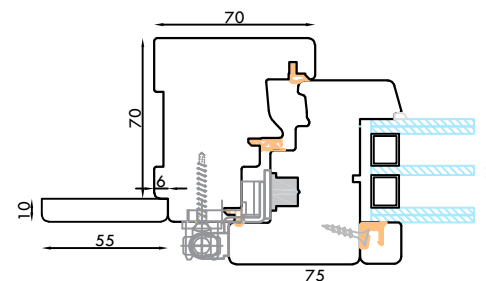

Maniglia in dotazione finitura standard cromo satinato.

Finestra in legno modello **LOGIKA SLIM TEKNO**

SLIM poichè l'anta è realizzata con sezione ridotta: anta sezione 68x80.

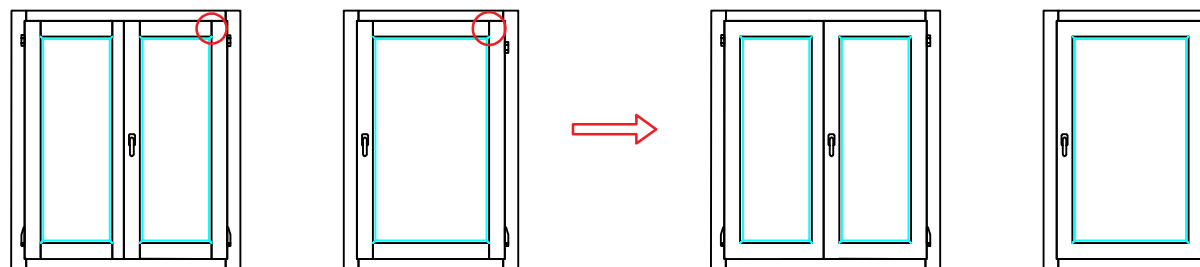

Le altre caratteristiche corrispondono alla finestra modello LOGIKA, ma le ridotte dimensioni legno permettono di aumentare la superficie vetrata e quindi la luminosità degli ambienti

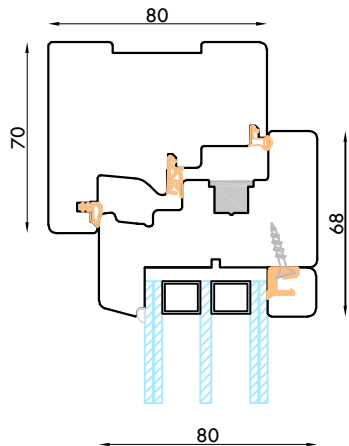

TEKNO perchè presenta assenza di rasamenti tra montanti e traversi

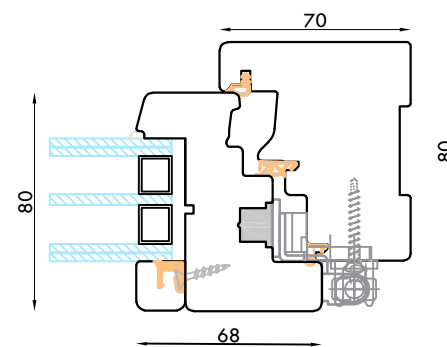

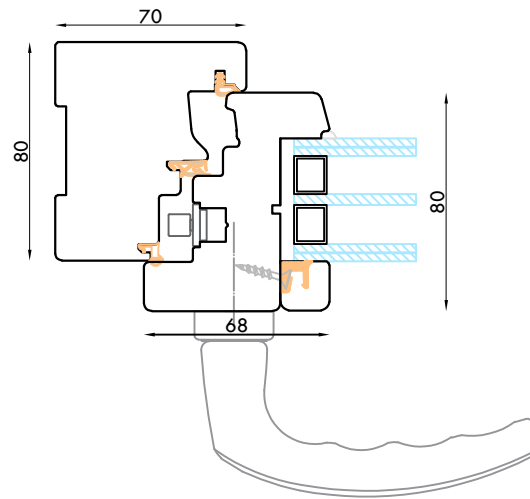

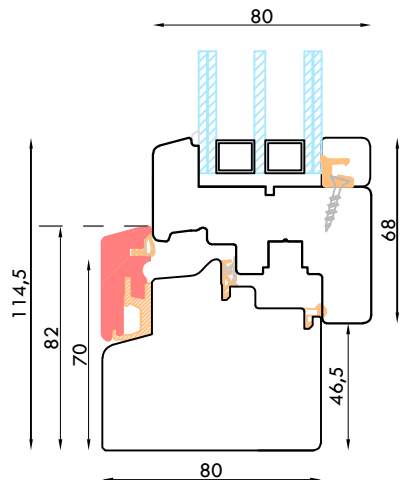

Modello SLIM, si riduce la parte legno e aumenta la superficie vetrata
